

ZKS – An Easily Redeemable Rewards Token for EOS CPU and Net

Michael Gucci, MD
Michael.Gucci@21Zephyr.com

Abstract

EOS Mainnet users struggle having enough CPU/Net resources when using games and other dapps. ZKS will offer an easily redeemable token solution for providing CPU/Net. We propose a simple solution in the form of ZKS tokens. ZKS will be a EOS compatible token and will be deployed on EOS Blockchain. These ZKS tokens will be distributed to EOS tokens holders and can be redeemed on the zks.one website for CPU/NET.

Introduction

ZKS will be a EOS compatible token and will be deployed on EOS Blockchain. These ZKS tokens can be exchanged, and given to customers by any business – some examples would be exchanges, restaurants, e-commerce sites, Conference Organizers, etc.

The ZKS tokens are redeemed for CPU and Network resources on the EOS Mainnet. Once you redeem a token, you will spend it and it will be deducted from your balance. We have simplified the process of allocating CPU and Network.

ZKS tokens have been designed to be a very simple utility token, that will provide 0.9 EOS of CPU, and 0.1 EOS of NET for 3 hours. There

are no complex mechanisms for issuance or redemption. Redemption of the token can be done on the zks.one website.

Note: Since there will be times of high demand, and given the finite system resources of the EOS Mainnet, the ZKS token does not guarantee redemption for CPU/NET.

Token economics

Initial supply: 1,000,000,000

Max supply : 10,000,000,000

Annual Inflation: 5%

Token distribution: ZKS tokens will be airdropped through a Claim Invitation. They will also be distributed to customers in partnership with exchange operators, event organizers, restaurants and ecommerce retailers.

Redemption schedule:

31 ZKS tokens to be airdropped to every EOS account with 0.1 EOS or more.

1 ZKS token = 0.9 EOS of CPU, and 0.1 EOS of Net for 3 hours.

Team

ZKS3103 SECZ

ZKS3103 SECZ is a software company in the Cayman Enterprise Zone. It is a wholly owned subsidiary of Z-Meta, LLC, a US based private investment firm.

Advisors

Michael Gucci, MD

Interim custodian for AirDropsDAC, Founder of Z-Meta private investment firm, Z11K accelerator in Chicago and 21Zephyr, Inc. Former ER physician and an early adopter of EOS.

Nathan Rempel

Interim CTO for AirDropsDAC, founding partner of Australian block producer GenerEOS and the sole developer of eostoolkit.io

Yohann Calpu

Interim COO for AirDropsDAC, Head of Community at HireVibes and advisor for HorusPay and Carmel.

Roadmap
